## Summary

Computer Science student (GPA 3.9) with hands-on experience in embedded systems, physics-based simulation, and teaching. Skilled in C/C++, Python, and system-level programming. Fascinated by the intersection of computing, aerospace, and physics, with experience spanning NASA sustainability infrastructure, CAN bus systems, and cloud/wind pattern tracking on Jupiter.

## Education

### UC Santa Cruz

B.S. Computer Science with Electrical Engineering Minor

Sept 2024 – Jun 2027

GPA: 3.9

*Relevant Coursework:* Data Structures & Algorithms, Intro to Electronic Circuits (+ Lab), Differential Equations

## Experience

### Firmware Engineer — Formula Slug, FSAE (C++)

Sept 2024 – Present

- Implemented automatic lap counting using GPS data and converting to local coordinate plane with a flat-Earth approximation and tolerance of  $\pm 10$  meters
- Designed and implemented software handling communication at 500 kHz over CAN bus.
- Ensured safe power delivery to LV systems
- Built on top of MbedOS, RTOS for STM32 MCUs; CMake with ninja for building and flashing to MCU
- Developed tooling to test hardware/software; collaborated with team of  $\sim 100$ .

### Planetary Cloud Tracking Research (C)

Jun 2025 – Present

- Exploring computer vision algorithms to track wind patterns on Jupiter and other planetary atmospheres.
- Implementing image processing algorithms in C
- Soon to be parallelized using either CUDA or compute shaders

### Instruction Officer — Google Developer Groups on Campus

Mar 2025 – Present

- Increased attendance by 30% in Data Structures & Algorithms sessions.
- Planned and hosted workshops; implemented participation-boosting initiatives.

### Vice President & Coding Branch Leader — BOBTutor

2021 – 2022

- Organized and led 3 coding programs; mentored 5 new team members.
- Coordinated schedules and developed resources to streamline teaching.

## Projects & Other Experience

### Lead Systems Engineer — NASA's NPWEE Program

June 2025 – Aug 2025

- Worked on mid-air battery swap infrastructure for electric planes.
- Spearheaded design and writing for the final proposal of 7 pages.
- Researched airspace management and aviation systems; workforce development program.
- Collaborated on a team of 12.

### WindowWise — ACMHacks (Node.js, Python)

Oct 2024

- Enables passive cooling systems instead of HVAC by solving heat equation
- Optimizes climate control while reducing energy waste by 100%.

### Three-Body Problem Simulator (Python)

2025

- Built a numerical physics engine simulating gravitational interactions of three bodies in 2D.
- Implemented ODE solvers and visualization of orbital trajectories.

### Ray Tracing in One Weekend (C++)

2025

- Implemented a physically-based rendering engine in C++.

## Leadership & Activities

### Formula Slug — Software + Firmware Engineering Member

### Association for Computing Machinery (ACM) — Member

### Google Developer Groups on Campus — Instruction Officer, Workshop Organizer

## Skills

**Programming Languages:** Python, C/C++, Java, C#, Node.js

**Programming Tools:** Linux, Git/GitHub, GNU Make, Vim, Valgrind, Docker

**Lab Tools:** Oscilloscope, Power Supply, Multimeter, Circuit Design (KiCad), Soldering

**Languages:** Python, C/C++, Java, C#, Node.js

**Tools:** Linux, Git/GitHub, GNU Make, vim, Valgrind, Docker

**Languages:** English (Fluent), French (Conversational), Cantonese (Spoken)
